What is claimed is:

- 1. An authentication information processing method comprising:
- 5 acquiring apparatus information of a user apparatus requesting a log-in;

determining a log-in procedure to be applied to the user apparatus on the basis of the apparatus information;

10 accepting a log-in operation from the user apparatus; and

judging, based on the determined log-in procedure and on the accepted log-in operation, whether the log-in from the user apparatus is permitted or not.

15

20

- 2. An authentication information processing method according to Claim 1, further comprising storing an accumulated log-in count from the user apparatus with the log-in count related to the apparatus information, wherein in determining the log-in procedure, the log-in procedure is determined in accordance with the accumulated log-in count.
- 3. An authentication information processing
 25 method according to Claim 1, further comprising
 storing a last log-in time from the user apparatus
 with the last log-in time related to the apparatus

information, wherein in determining the log-in procedure the log-in procedure is determined in accordance with a period elapsed since the last log-in time.

5

10

- 4. An authentication information processing method according to Claim 3, further comprising determining a security level for the user apparatus by referring to any one of the apparatus information, the accumulated log-in count and the elapsed period, wherein in determining the log-in procedure the log-in procedure is determined in accordance with the security level.
- 5. An authentication information processing device comprising:

apparatus information acquiring module acquiring apparatus information of a user apparatus requesting a log-in;

- log-in procedure determining module determining a log-in procedure to be applied to the user apparatus on the basis of the apparatus information; log-in accepting module accepting a log-in operation from the user apparatus; and
- log-in judging module judging, based on the determined log-in procedure and on the accepted log-in operation, whether the log-in from the user

apparatus is permitted or not.

- 6. An authentication information processing device according to Claim 5, further comprising accumulated log-in count storing module storing an accumulated log-in count from the user apparatus with the accumulated log-in count related to the apparatus information, wherein the log-in judging module determines to the log-in procedure in accordance with the accumulated log-in count.
- 7. An authentication information processing device according to Claim 5, further comprising last log-in time storing module storing a last log-in time to be applied to the user apparatus with the last log-in time related to the apparatus information, wherein the log-in procedure judging module determines the log-in procedure in accordance with a period elapsed since the last log-in time.

20

25

5

10

8. An authentication information processing device according to Claim 7, further comprising security level determining module determining a security level for the user apparatus by referring to any one of the apparatus information, the accumulated log-in count and the elapsed period, wherein the log-in procedure determining means determines the log-in

- 31 -

procedure in accordance with the security level.

9. A storage medium that stored an authentication information processing program making a computer process authentication information, the program comprising:

acquiring apparatus information of a user apparatus requesting a log-in;

determining a log-in procedure to be applied to the user apparatus on the basis of the apparatus information;

accepting a log-in operation from the user apparatus; and

5

judging, based on the determined log-in procedure

15 and on the accepted log-in operation, whether the
log-in from the user apparatus is permitted or not.

- authentication information processing program

 20 according to Claim 9, further comprising storing an accumulated log-in count from the user apparatus with the accumulated log-in count related to the apparatus information, wherein in determining the log-in procedure the log-in procedure is determined in accordance with the accumulated log-in count.
 - 11. A storage medium that stored an

authentication information processing program according to Claim 9, further comprising storing a last log-in time from the user apparatus with the last log-in time related to the apparatus information, wherein in determining the log-in procedure the log-in procedure is determined in accordance with a period elapsed since the last log-in time.

5

12. A storage medium that stored an

10 authentication information processing program

according to Claim 11, further comprising determining

a security level for the user apparatus by referring

to any one of the apparatus information, the

accumulated log-in count and the elapsed period,

15 wherein in determining the log-in procedure a

security level is determined by referring to the

security level.
